Revision and Errata List
AISC *Specification for Structural Steel Buildings*, 2022

Date: September 23, 2026

The following list represents corrections to the AISC *Specifications for Structural Steel Buildings*, dated August 1, 2022. These corrections are in addition to those on previously released errata lists.

Page(s)	Item
16.1-lvi	Revise the section reference provided in the definition for *HSS (hollow structural section)* from Section A3.1a(b) to Table A3.1.
16.1-83	Revise the units for L_b pertaining to Equation H1-2 as follows: ~~in.^{4} (mm^4)~~ in. (mm).
16.1-109	In Equation I5-2, replace F_{yr} with F_{ysr}.
16.1-120	The metric equivalent shear elastic stiffness provided in Section I8.4d, Item (3), should updated as follows: ~~180 N/mm~~ 350 000 N/mm.
16.1-202	Revise the units for F_n pertaining to Equations A-2-1 and A-2-2 as follows: ~~kips (N)~~ ksi (MPa).
16.1-603	Revise the units of the heat perimeter of steel shape, D, to in. (m). Revise the units of the heat transfer coefficient, a, to Btu/(ft-in.-s-°F) (W/m^2-°C). Revise the units of the Stefan-Boltzmann constant to Btu/ft-in.-s-°R^4 and W/m^2-K^4.
16.1-603	Update the number 479 to 459 and remove the 1.8 from the denominator in the first expression for calculating T_{FK}, resulting in the following: $T_{FK} = (T_F + 459)$ for T_F in °F. Update the number 479 to 459 and remove the 1.8 from the denominator in the first expression for calculating T_{sk}, resulting in the following: $T_{sk} = (T_s + 459)$ for T_s in °F.
16.1-630	In Commentary Section App. 5.2.6, the section reference to AISC Design Guide 15 should be updated from Section 1.3 to Section 4.3.
